DETAILED ACTION

Claims 1-3 are pending in the instant application, all of which are currently amended. There are no new or canceled claims.

Response to Amendment

Applicant's amendment, see Amendment – After Non-Final Rejection, filed 12/06/2006, with respect to **Claims 1-3** has been fully considered and is entered. The rejections of **Claims 1-3** are withdrawn.

Statement of Reasons for Allowance

The present invention pertains to the pyridine described in formula I, a method of preparing formula I, and a method of using formula I for the treatment of hepatitis C. The compound according to formula I is free of the prior art; nothing known in the art anticipates or renders formula I obvious. The closest prior art related to the formula I is compound RN 470702-06-8, taught by Bryan *et al.* (US Patent 7,087,758). Compound RN 470702-06-8 contains a similar structure to formula I (a phenyl-morpholinyl-amino group at C-2 of the nitrogen heterocycle and a carboxylic acid at C-3); however, the compound is a quinoline heterocycle and formula I is a pyridine.

Art Unit: 1626

One skilled in the art would be enabled to make and use the compounds taught herein for the purpose of treating hepatitis C using the teachings of the Specification (background on pages 1-6; biological assays on pages 10-13: the examples establish the compositions of formula I as inhibitors on recombinant HCV RNA Polymerase *in vitro*) in conjunction with the teachings in the prior art (the review by Worman *et al.* *World Journal of Gastroenterology* **2000**, 6(4), 465-469 supports the nexus between the inhibition of HVC RNA polymerase and the treatment of hepatitis C).

Claims 1-3 are allowed.
